## RF Camera System

Camera Mounted Transmitter & Data Receiver

MPEG 4 Receiver

Camera Control RCP Interface

Camera Control Data Transmitter

HD CameraLink Fiber Interface

HD CameraLink Fiber Interface

The Quick Deploy is a full featured wireless camera system designed for today's production needs. At its core is the Gigawave MPEG4 MTV-HD3 receiver - with convenient front panel video monitoring. Full camera control, using the manufacturers' OCP, is made possible with our own RF Camera Control. And all signals (video, audio, intercom and data) are transported over two strands of fiber, by our HD CameraLink. These components work together to simplify and streamline the setup and implementation of an RF camera.
