

Solution Brief

Cam STREAM

All-in-One Production and Streaming Platform for Virtual Medical Conferences, Meetings and Training Sessions

As a producer of medical conferences and other live events, you're undoubtedly facing challenges today that were unimaginable even a year ago. In today's "new normal" world, you need an easy-to-use content-acquisition platform that lets you virtualize medical conferences, seminars and training sessions of any size. You need a way for team members who may not be technically savvy to remotely shoot and stream high-quality video — and deliver rich attendee experiences that are much more compelling than those possible with off-the-shelf conferencing software.

CP Communications has the ideal solution: our all-in-one Cam STREAM remote production and streaming package. Just connect

Cam STREAM to power and turn it on. The system automatically calls home, and within minutes you're ready to start live streaming your medical event with broadcast-quality 1080p60 video and up to two channels of remotely controlled audio. A secondary input lets you send presentations, charts and other content as part of the live stream.

Part of our family of Red House Streaming STREAM packages, Cam STREAM makes it incredibly simple and cost-effective to shoot and record HD live video remotely and deliver it to websites, social media platforms or any URL. The turnkey, plug-and-play solution helps you to produce virtual events that bring people together, foster the exchange of insightful content and leave lasting impressions.

The base Cam STREAM package is contained in a single flight case and can be set up in just minutes. Your video is captured by a Sony SRG-X120 HD PTZ camera. Preset camera functions let you begin shooting immediately, while remote camera control and shading allows technicians located anywhere to make adjustments on the fly to assure ideal coverage.

All RHS STREAM solutions are powered by Mobile Viewpoint (MVP) encoding and decoding technology. Cam STREAM features an MVP Agile AirLinkH.265 encoder that supports live streaming over Ethernet, Wi-Fi and 4G/5G cellular networks to enable connectivity from virtually anywhere. MVP's LinkMatrix cloud-based management and control system serves as the central monitoring unit. Its user-friendly architecture assures that the remote-control GUI is the same in the field and the studio, facilitating true remote support. With an optional MVP Payout 2K4 decoder located in the studio, feeds from up to four Cam STREAMs can be received and played out to HD-SDI or NDI, and simultaneously streamed to any social media platform or URL.

Additional Cam STREAM elements include an integrated monitor, SIM cards and 20GB of cellular data. With CP's all-in-one Cam STREAM, producing virtual medical conferences, meetings and training sessions becomes the smart alternative to holding complex and expensive in-person gatherings.

Solution Highlights

- All-in-one packaging for fast, easy live video streaming
- Broadcast-quality 1080p60 resolution and professional-quality audio
- Reliable connectivity via 5G, LAN and/or Wifi
- Remote camera and audio management
- Stream directly to Facebook, YouTube or any URL
- Affordable weekly rental rate

Cam STREAM All-in-One Remote Production and Streaming Platform for Virtual Medical Conferences

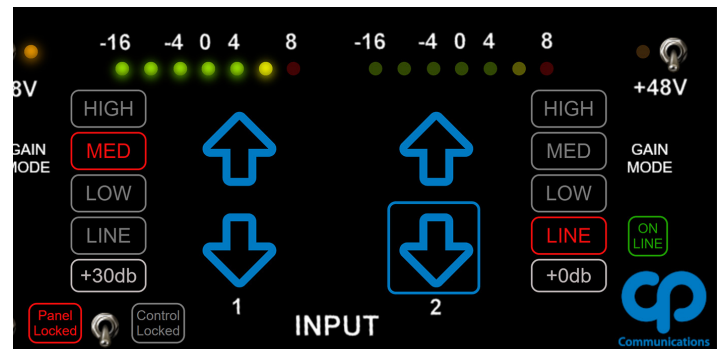

Solution Features

- H.264 and H.265 encoding
